

AMANDA CLEARCREEK LOCAL SCHOOLS

COST EFFECTIVE HVAC SOLUTIONS INCREASE SCHOOL DISTRICT EFFICIENCY

The Amanda Clearcreek School District asked Air Force One to review District expenditures and determine the most cost saving and efficiency increasing maintenance plan.

Through a full-service agreement, Air Force One is providing HVAC solutions for the entire Amanda Clearcreek school district. The district is focused on energy efficiency, and Air Force One is identifying opportunities and solutions to reduce energy consumption and demonstrate measurable improvements to the community.

Air Force One performed energy consumption studies at the school and helped the District understand options that decreased cost and increased efficiency. Air Force One reviewed the current service providers and helped Amanda Clearcreek reduce the District's total cost of services by \$15,000 annually. The district added open protocol building automation, and three JACE installations are planned to change the District's BAS system to an open protocol system. Additional repairs to heat wheels, valves, VFDs, and chillers provided balance in comfort and efficiency.

"We are excited about the opportunity to partner with Amanda Clearcreek on their energy conservation efforts," said Air Force One CEO Greg Guy. "School districts of all sizes are looking for innovative ways to manage their HVAC assets, improve energy efficiency and ultimately control costs. We're here to deliver strategic solutions that meet these goals."

Amanda Clearcreek Local Schools, which has approximately 1,600 students in grades K-12, contains five buildings, including the newest building, a 58,000 square foot K-2 building completed in August 2005. Air Force One has worked with public K-12 institutions throughout Ohio, providing comprehensive, tailored solutions for academic facilities.

Commitment to Optimal Building Performance helped the Amanda Clearcreek Local School decrease operating costs. Timely repairs have made the facility more comfortable and made cash flow available for other educational needs.
