

MULTI-FACILITY HEALTHCARE PROVIDER

LEADING HEALTHCARE PROVIDER DISCOVERS HVAC ENERGY AND EFFICIENCY IMPROVEMENTS

A leading Multi-Facility Healthcare Provider chooses to establish a central and custom online reporting program.

While providing tenant spaces, nursing, and healthcare facilities throughout the United States and Puerto Rico, a Multi-Facility Healthcare Provider sought to maintain equipment and establish a central and custom online reporting program to assess risks, track assets, and manage energy.

First, Air Force One met with property managers across the portfolio to determine their individual property needs. Custom solutions and Preventive Maintenance agreements aimed to increase the equipment useful life, reduce overall operation cost and downtime, and provide energy efficiency. Air Force One's Preventive Maintenance Program enabled the Provider to mitigate risk and extend equipment life of boilers, chillers, and high dollar pieces of equipment.

Air Force One additionally provided access to an online reporting system that allowed the client to view equipment inventory, estimate capital expenditure, and place and track service calls in real time.

Initially, the Multi-Facility Healthcare Provider received an accurate facility and equipment inventory for their entire portfolio. Then Air Force One assessed capital needs for all locations, performed uniform Preventive Maintenance throughout the United States, and became the Single Point of Contact for over 300+ individual facility managers.
